SUMMARY

React Native and frontend engineer with 6+ years independently architecting, building, releasing, and supporting a production cross-platform application. Combines hands-on TypeScript development with responsive UI, product ownership, release management, production incident response, and recent Maestro/YAML mobile end-to-end testing for a production React Native/Expo application.

SKILLS

Frontend

React Native | React | TypeScript | JavaScript | HTML5/CSS fundamentals

Engineering

REST APIs | Node.js tooling and dependency management | Git | Bitbucket | Jira | Docker (local development)

Mobile QA

Maestro | YAML | Mobile end-to-end testing | UI automation | Black-box, smoke, adversarial and regression testing

Mobile & UI

Responsive cross-platform UI | React Native StyleSheet | iOS/Android releases | Client-side push notifications

Delivery & Collaboration

Figma and design reviews | Code reviews | Collaborative debugging | Product ownership | Release management | Production incident response

Test Safety & Reporting

Accessibility/testID selectors | Test isolation | Synthetic test data | Stripe test mode | JUnit | Git build provenance | Release QA

EXPERIENCE

Frontend Engineer (Contract) - Guusto Gifts Inc.

Mar 2020 - Jul 2026

Remote - Canada-based company

- Independently architected and built the company's React Native mobile application from scratch, shipping it to the Apple App Store and Google Play Store.
- Owned the application for 6+ years, including feature development, performance improvements, release management, production maintenance, and five years as its primary on-call responder.
- Migrated the full production mobile codebase from JavaScript to TypeScript, improving the foundation for continued feature development and maintenance.
- Built responsive interfaces across device sizes and resolutions, implemented Figma designs, and participated in design reviews throughout the product lifecycle.
- Integrated REST APIs and client-side push notifications; maintained the JavaScript/TypeScript codebase, Node.js toolchain, dependencies, Git and Bitbucket while collaborating across backend, web, design, and product.
- Reviewed code and debugged with other React Native developers during the final six months, then led a three-month handover to a Brazil-based engineering team through documentation, walkthroughs, and onboarding.

RECENT MOBILE QA PROJECT

- Designed and implemented a staging-locked black-box mobile QA harness for a production React Native/Expo application using Maestro and YAML, covering role-aware smoke, adversarial, CRUD, restart, public-booking, and Stripe card PaymentSheet staging flows.
- Added stable accessibility/testID selectors, semantic naming, environment and Git SHA safety guards, explicit device targeting, JUnit reports, screenshots/debug artifacts, synthetic-data cleanup, and npm test commands; designed and instrumented a two-device protocol for real-time client-technician messaging.

EDUCATION

Diploma, Computer Information Technology - BCIT, Canada

Game Development specialization coursework - BCIT, Canada

Web Development, React & React Native Bootcamp - RED Academy, Canada

WORK AUTHORIZATION

Based in Nara with Japanese spouse status. Canadian and Irish citizen - authorized to work in Canada and the European Union. Open to remote work or relocation within Japan, Canada, or Europe.
